

# Access Tonido in stand alone mode without relay

With Tonido, it is pretty easy to do it. Here's how.

1. Install Tonido Desktop, and setup an account say (johndoe) normally.
2. After logging in, go to Settings->Network and disable Tonido Relay.
3. In your router, enable port forwarding to the computer you installed Tonido on for port 10001.
4. Now to access your Tonido install, simply type <http://johndoe.tonidoID.com:10001> and you will be connecting to your Tonido Desktop directly.
5. Your own Dynamic DNS or Domain: If you want to use your own domain using Dynamic DNS or similar you can do so too, you just point your Dynamic DNS domain to point to the IP address of the computer on which Tonido is running on.

The screenshot shows the Tonido Desktop settings interface. On the left is a sidebar with navigation options: BROWSE (Files), LIBRARY (Music, Photos, Videos), SHARING (Shared Files), SHORTCUTS (Recent, Favorites), MEDIA (Player), and MISC (Applications, Settings). The main content area has tabs for General, Account, Network (selected), Misc, Log, and About. The Network tab is divided into two sections: Relay Settings and Web Settings. In the Relay Settings section, the 'Enable Relay' checkbox is unchecked, with a yellow callout box pointing to it that says 'Enable or Disable Relay'. In the Web Settings section, the 'Enable Remote Web Access' checkbox is checked. Below it, the 'HTTP Port' is set to '10001', which is highlighted with a red box and a yellow callout box that says 'Click on this to Change the port no.' Other options in the Web Settings section include 'Allow Remote Admin, New Account Creation and Remote Deletion' and 'Enable SSL without using Relay (Biz only)', both of which are unchecked.
